FY08 – 45 DEQ reissuance of a VPDES permit for Nelson County Regional STP

The Department of Environmental Quality proposes to reissue the Virginia Pollutant Discharge Elimination System Permit for the Nelson County Regional Sewage Treatment Plant in Lovingston. The plant is permitted to discharge up to 220,000 gallons per day into Black Creek in the Upper Tye River watershed. The permit contains limits on organic matter, solids, chlorine, bacteria, ammonia, dissolved oxygen, pH, and metals. The permit and monitoring records have been requested but not yet received. Sludge will be dried and hauled to the Maplewood Recycling and Waste Disposal Facility for disposal; pumped and hauled to the Lynchburg Regional Wastewater Treatment Plant in Lynchburg for further treatment; and/or land applied to 38.66 acres of agricultural land.
